BUPT_Minecraft(Xitucheng Campus)-V.20201018-User Guide

Project Introduction

This project is based on the Java 1.15.2 version of Minecraft (Minecraft, hereinafter referred to as MC) to achieve a rough restoration of the Xitucheng campus of Beijing University of Posts and Telecommunications. On the basis of the original real campus, we combined some of the unique elements of MC, and also made some trade-offs in the restoration and aesthetics of the scene. Generally speaking, the degree of completion of the buildings is relatively high, but due to technical limitations, the interior views of many buildings have not yet been completed and are expected to be updated in future versions.

Requirements

Environmental requirements: Java JRE only.
Attached to the official website of Java jre：
https://www.java.com/zh-CN/download/manual.jsp

Client Usage

The following tutorial is for MC novices only. Take the Windows system as the operating environment. We do not provide tutorials for Linux, Mac or other operating systems at this time：
1. Unzip the Client_Minecraft_1.15.2.zip compressed package, open the HMCL*.exe file, choose genuine login with Mojang account, choose offline login, customize the user name, fill in the confirmation.

You need a MC account

2. Click on the icon where "1.15.2_new" is labeled under the game list on the left to enter the game settings window, where you can adjust the game running memory size, resolution and other parameters. The game running memory is recommended to be no less than 1G, and the default is 4G .

After setting, click the home icon above to return, and click the blue button in the lower right corner to start the game.。

- After entering the game, the default language is English, the lower left corner can switch the language, select single player mode, select archive, double-click to enter the game.

Game Operation:

Enter the default creative mode of the game, you can fly, press space key to increase height of viewpoint, the shift key is to decrease, press the ctrl key can accelerate pan speed, the left key can destroy the blocks, the right key places a block, and E key opens the inventory.

Precautions

This client is only the clean version of 1.15.2, does not contain the Optifine plugin light which produce shadow effects in the screenshots, you can search and download plugins by yourselves.

This client only contains the Windows version, and you can download campus scene document in directory "Saves" and use it accordingly.

The archive contains some debris that does not match the scene, please ignore them. They will be deleted in the new archive.

There are "display boxes or windows" in some places in the archive, which are caused by some plug-ins supposed running on the server and not existed in the single-player client, please ignore it. This will be resolved after the server goes online in the future.
